Folio demo guide

A 20 minute walkthrough for leadership, in three parts: a new hire, a contributor and an administrator. Tick each box as you go.

The message. Folio is the firm's wiki: one place to find how we work, searchable, linked and kept current. It explains the work and **points to the systems we already use**. It does not replace them, and it does not hold contracts or issued documents. Anyone can read and comment. A few people write. Folio shows who has read what.

Before you start

- Open Folio. Click your initials, then **Settings**, then the **Advanced** tab.
- Under **Vault setup**, beside **Demo**, click **Start**. It takes a few seconds.
- Folio opens the sample vault as **Ellen Ward**, a new hire in her second week.
- Your own vault is not touched. Nothing you do in the demo reaches it.

The purple bar

- **Open Viewing as** and pick anyone from the sample vault, grouped by access level. Folio reopens as them. The user menu's **Switch** opens the same list.
- **Guide** opens this sheet. **Reset** starts the demo over.
- **Exit demo**, or closing the window, puts your own Folio back.
- The demo's calendar is **Monday 5 October 2026**, whatever today is.

1 Ellen Ward, User: a new hire finds her way

about 10 minutes

		DO	SAY	THEY SEE
☐	1	Stay on **Home**. Point at the search box, the doors, **What's new** and the **Onboarding** meter.	*Ellen started last Monday. This is the first screen every morning.*	Doors to Continue, Browse, Saved, What's new and How it works. Onboarding shows one to catch up.
☐	2	Press **Ctrl K** and type **expenses**.	*One search covers the whole firm: company pages and team pages together.*	Results grouped by page, with the matching lines highlighted.
☐	3	Open **Travel and Expenses**. Scroll through the steps, the warning, the table and the project code box.	*Written the same way every time: when to use it, the steps, the rules.*	Numbered steps, a warning callout, a table, a code box.
☐	4	Click **expense portal** in step 4. Close the new tab.	*Folio points to the real system. It does not replace it.*	A new tab opens (a sample address, example.com).
☐	5	On **Describing a claim**, click **Copy** on the box.	*Standard wording, one click, no retyping.*	The text is on the clipboard, ready to paste.
☐	6	Click **Comments** (the speech bubble, top right of the page).	*Ellen asked a question last week, and Finance answered it on the page.*	Ellen's question and Marcus's reply, pinned to the table section.

☐	7	Point at the **Project codes** heading and click its comment icon. Choose **Question**, type *Which task code is a conference?*, then **Post**.	*The next new hire gets the answer too. Email helps one person once.*	The question appears under the section. Dana will answer it later.
☐	8	Click **Who to Ask** (in the last section, or under Company). Click the org chart to zoom.	*Pages link to each other. That is what makes it a wiki, not a folder.*	Picture beside the text, a table of who answers what. An Onboarding banner at the top.
☐	9	Open **Company**, then **New Hire First Week**. Point at the **Catch up** banner. Scroll to the end.	*Onboarding paces itself over six months. Read to the end and wait: it cannot be clicked through.*	The banner says "Read to the end", then counts down 15 seconds (longer on a real vault).
☐	10	Click **Mark as read**.	*Folio records the date and how long she spent on the page.*	"Read, 5 Oct, 20 s on this page", with Undo.
☐	11	Open **Our Project Lifecycle**. On the board, click the full screen button (bottom right). Drag to look around, then hold **Ctrl** and scroll to zoom in on phase 3.	*A board shows a whole process at a glance, drawn in Obsidian. Good for a meeting or a training session.*	Five phases as coloured groups, with a card for each process page.
☐	12	Click the **Submittal Review** card in phase 3.	*Every card is the real page. The company process leads straight into the team's own.*	Full screen closes and the Submittal Review page opens.
☐	13	Click **Save** (the bookmark) in the page bar. Go **Home**, open **Saved**.	*Your own short list, on any computer.*	Submittal Review in Saved.
☐	14	Open **What's new**. Click **Start Here**.	*Nobody has to announce changes. Folio shows what is new and which section changed.*	Intercoms is New. Start Here, Camera Placement and Cable Pathways are Updated, with the sections named.
☐	15	Click the **?** in the header. Open **Using Folio**, then go back.	*Help is built in, written for each access level.*	The amber help bar and the guide cards.

2 Dana Whitfield, Contributor: keeping it right

about 5 minutes

	DO	SAY	THEY SEE
☐ 1	In the purple bar, open **Viewing as** and pick **Dana Whitfield**.	*Dana writes and reviews pages for her group. Same app, more buttons.*	**New page** in the header and an **Admin** door on Home.
☐ 2	Open **Admin**, then **Review**.	*Every page is reviewed. This is the queue, oldest first.*	Pages waiting: to be reviewed, flagged and with questions.
☐ 3	Click **Review page** on **Camera Placement**, look at what changed, then **Approve**.	*You see exactly what changed since it was last approved.*	The new Worked example section marked, then the page leaves the queue.
☐ 4	Open **All comments**. Find Ellen's question on **Travel and Expenses**, **Reply**: *Use TRN*, then **Mark closed**.	*Every open question in the vault, in one list. Nothing gets lost.*	The reply under Ellen's question; the comment folds to one line.
☐ 5	Open **Templates**. Click **Process**, then **Outline** and **AI prompts**.	*Every page type has a shape, so pages read the same across the firm.*	A sample Process page, its sections, and ready-made prompts for writers.
☐ 6	Click **New page**. Pick **Guide**, type a title. Point at the number and the folder. Click **Cancel**.	*New pages start from a template and wait in Drafts until reviewed. Writing happens in Obsidian, which we show separately.*	The template's sections, the next free number, and where it will be filed.

3 Jayson Stickrod, Administrator: knowing it works

about 6 minutes

	DO	SAY	THEY SEE
☐ 1	In the purple bar, open **Viewing as** and pick **Jayson Stickrod**. Open **Admin**, then **Users**.	*Who owes what, at a glance. Red is overdue, yellow is owed.*	Seven people. Ellen is new staff, day 6, in her two-week cushion.
☐ 2	Click **Ellen Ward**'s row to open it.	*New staff are not buried: must reads wait until her two-week cushion ends. And here is what she read earlier, with the time she spent.*	Must reads marked Held until 12 Oct; her onboarding list with New Hire First Week read.
☐ 3	Click **New must read**. Pick a page, choose **All**, look at the priority slider. Click **Cancel**.	*A new policy? Assign it to everyone with a due date, and see who has read it.*	Page, people, Critical to Casual, and the due date it sets.
☐ 4	Open **Usage**. Then the **Searches** tab.	*Which pages earn their place, and what people searched for and did not find. That is the list of pages to write next.*	Most read pages, pages never opened, searches with no results.
☐ 5	Open **Vault check**.	*Folio checks its own health: pages nothing links to, overlapping pages, broken links.*	A short list of findings, each with a fix or Dismiss.

☐	6 Open **Staff update**. Click **Copy for email**.	*The weekly note about what changed writes itself.*	Must reads, new pages and updates, ticked and ready to paste into an email.
☐	7 Optional: open any page, **More**, then **Edit**. Change a word and save.	*Small fixes can be made right here. The change goes to Review like any other.*	The page updates; Review gains a row.

Close

- ☐ *One place to find how we work. Searchable, linked and kept current, with review built in. It points to our systems instead of replacing them, and it shows who has read what.*
- ☐ Writing pages in Obsidian is a separate demo.
- ☐ Click **Reset** to run it again, or **Exit demo** to go back to your own vault.

If something looks wrong mid-demo, click **Reset**. It starts over from the beginning in a few seconds. Sample names and links are made up; links go to example.com.
